Carlos Henrique de Sá Filho

Software Engineer @ Gsurf - Vue.js Specialist
Tubarão, Santa Catarina, Brazil

Summary

As a Software Engineer, I specialize in Vue.js, a powerful and elegant framework for building user interfaces. In my experience, I have engineered software solutions that have elevated companies' profit, efficiency, and reputation.

My core competencies include collaborating with cross-functional teams, and adhering to the SOLID principles of software design. I also have a strong proficiency in Vuetify, and Vuex/Pinia enabling me to craft beautiful, robust and reliable solutions. I'm passionate about technology and constantly driven to learn new skills and stay updated with the latest trends and innovations in the field. I aim to create solutions that positively impact the people who use them.

Experience

gsurf

Software Engineer

May 2022 - January 2026 (3 years 9 months)

Tubarão, Santa Catarina, Brazil

- Created a utility javascript file to validate fields in all systems, using the native validation of Vuetify. Since the company works with financial data, new security certificates were introduced, making old libraries deprecated or insecure. One of the libraries was VeeValidate, and updating it would cause many breaking changes. By using the native validation of Vuetify, the company projects got certified on security standards. (Vue.js, Vite, Vuetify, VueRouter, Vuex, Vuel18n, ESLint)

- Migrated a whole system from Vue 2 to Vue 3, elevating the security standards of the company project. (Vue.js, Vite, Vuetify, VueRouter, Vuex, Vuel18n, ESLint)

- Developed a multi-factor authentication using Google MFA on the login page of the company that led to a more secure way for the users and the company. (Vue.js, Vite, Vuetify, VueRouter, Vuex, Vuel18n, ESLint)

- Migrated 4 legacy systems that used Webpack, to Vite. Those systems ranged from 3 to 5 years of old code. This optimization reduced the average processing time to start developing using yarn dev, from 5 minutes to 5 seconds. (Vue.js, Vite, Vuetify, VueRouter, Vuex, Vuel18n, ESLint)

Subs Restaurante

Manager

April 2017 - May 2022 (5 years 2 months)

Brazil

I worked at my family restaurant, where I was responsible for managing overall operations. My duties included customer service, purchasing, inventory control, marketing materials, sales, and delivery coordination. I also conducted research and implementation of software solutions to streamline operations and improve service efficiency, as well as introduced new payment methods to boost sales.

In addition, I actively sought business partnerships within the shopping mall, engaging with employees from other stores to create cross-promotions — which led to a 40% increase in sales.

Beyond these tasks, my role also involved:

Team leadership and staff scheduling to ensure smooth daily operations.

Financial management, including monitoring revenue, expenses, and profit margins.

Quality control of both food and customer experience.

Strategic planning to identify market trends and implement promotional campaigns.

Supplier negotiation to reduce costs while maintaining high standards.

Astu Mobilis

Chief Executive Officer

May 2012 - September 2017 (5 years 5 months)

Brazil

I founded a company called Astu Mobilis, which specialized in taking 360-degree photos for businesses to showcase their portfolios. We provided these services to several companies that wanted to display their leisure areas or apartments for sale, allowing their clients to have a digital immersion experience and boost sales.

Around 2014, we also began offering other services, such as providing 3D materials for construction companies, real estate agencies, and architecture firms. We combined this with Blender technology, working with augmented reality, filming construction sites, and performing video editing so that the 3D models we created in Blender could be merged with real footage — making the building appear realistically integrated into the video, even before the construction was completed.

Rellven

Chief Executive Officer

September 2010 - February 2012 (1 year 6 months)

Brazil

I founded the company Rellven within a business incubator at Unisul University. The company focused on developing video games using open-source software. I used the Blender Game Engine for game development and handled the scripting part in Python. We participated in several business rounds with potential clients, connecting education with video games.

Projedata

Software Engineer

March 2009 - May 2009 (3 months)

São Ludgero, Santa Catarina, Brazil

Systems programming, solving operational problems, transcribing one language into another, and translating parts of systems into English. Java.

Nuntec Fuel Management of Fleet

Software Engineer

March 2008 - September 2008 (7 months)

Tubarão, Santa Catarina, Brazil

Software developer for truck monitoring and management. PHP, MySQL.

University of South of Santa Catarina

Helpdesk

April 2007 - October 2007 (7 months)

Tubarão, Santa Catarina, Brazil

Helpdesk/telephony for Unisul's online service system.

Education

University of South of Santa Catarina

Bachelors, Computer Science · (2006 - 2010)
