

Erick Sotile

Águas de Lindoia - SP, 13940-000, Brazil
Tel.: +55 11 9 9466-5555 (mobile / WhatsApp)
E-mail: esotile@gmail.com

Married
49 years old
(25/09/1976)

Senior SAP SD OTC, O2C & S/4HANA Specialist

Qualifications Summary

Erick Sotile is a professional with **24 years** of experience (2002) in SAP ERP (S4, ECC & R/3), sales, and logistic processes, as well as about 8 years' working in the field of foreign trade finance area.

Erick lived in **USA** for **2.5 years**, implementing SAP ERP OTC.

Currently he is in **Brazil Tax Reform projects**. He just implemented of an **SAP Global Rollout to Brazil in Machinery Industry**.

Highlights:

- Technical Leadership in international project.
- O2C Coordinator, Technical Leader, Changes Implementation Manager
- **Experienced** O2C / LES with **ABAP** program / debug skills and Advanced Excel with VBA for data analysis.
- 5 Global Full SAP Rollout projects, being 1 in SAP **S/4HANA** and 1 full SAP implementation in **USA**.
- 90% working in **Global Teams** (US, LA, France, Germany, India, Poland, China).
- At least 6 years' experience in Scrum **Agile** Projects.
- **Fluent English**.
- **Customer focus** balancing time, cost and expectations.
- Technical, business and management skills harmony.
- **MBA & 2 bachelor's degrees**.

Other experiences:

- Background in metallurgical, chemistry, and pharmaceutical companies
- Experience with SAP C/4 SD integration
- Proficient in SAP LES Transportation
- AMS Support at the third level
- Skilled in using SSM - SAP Solution Manager
- Ability in Brazil localization (taxes and NF-e)
- Data migration experience
- Development of customer personalized solutions, automation, and integration
- Knowledge in artificial intelligence (AI)

Erick is **mild-tempered** and very **dedicated**, hardly giving up until he figures out a solution to meet his customer expectations. He has been very well evaluated to have strong customer orientation, being **goal-oriented**, **creative** and **reliable**.

Membership

Member of **Mensa** International (#3725) – **Gifted / High IQ** Society

SAP ERP Knowledge

SAP SD, LES, TRA, OTC, Nota Fiscal Electronica (NFe), ABAP, WM, LSMW, Data Migration, Idoc's, S/4 Hanna on-premise (implementation)/Public Cloud (knowledge), Fiori, SAP C4C (basic), API/Webservices, IA, Agile projects, integration, B2B, B2C.

Academic Education

- | | | |
|------------------------|---|------------|
| ✓ Post-graduate / MBA: | IT project and governance management – USP – SP | (2 years) |
| ✓ Graduation: | Information System - FIAP – SP | (3 years) |
| ✓ Graduation: | Business management with foreign trade focus– USJT – SP | (4 years) |
| ✓ Technician: | Data processing – ETE Lauro Gomes – SP | (1.5 year) |

Languages

- ✓ English: advanced/fluent
- ✓ Spanish: intermediate
- ✓ Portuguese: native

Other

- ✓ Stock Market– value investing training.

Professional Experience - Details

✓ **Robert BOSCH (Campinas & USA)**

- ✓ Metallurgical Technologies for several segments: cars, tools, smart cameras, etc.
- ✓ He has been in the corporation since December/2021, as Senior SAP SD Consultant.
- ✓ Highlights:

2026 – current: Brazil Tax/Tributary Reform Implementation – Phase 2

2025 –Brazil Tax/Tributary Reform Implementation – Phase 1 (Reforma Tributaria)

2023 – 2025: SAP global rollout to Brazilian industrial machinery business.

- Adapt Brazil's localization to work with global sales orders.
- Enhance Standard Brazilian programs.
- Own solution to centralize all tax company's developments in a single point, called ZDICA. It is an enhancement in standard programs to emulate standard tax and fiscal determination (J1 BTAX) but getting data from local developments (single transaction, tables and Z developments).
- Data migration of customers, materials, info records, sales orders, quotations and schedule agreements, using LSMW and local developments.

2023: Enhancements for Automotive division. SAP SIS/LIS (sales & logistics information systems) . Also, SAP Technical upgrade project (support packages and sap notes update).

2021 – 2022, for North America business:

- Technical responsible for the improvement project of ERP service sales integration from CRM C4C in USA, via Idoc's and API.

✓ IHARA (Sorocaba)

- ✓ Japanese origin Agro-Defensive Company.
- ✓ He was in the corporation from 2019/08 to 2021/12, as Senior SAP S/4 Hanna SD Consultant.
- ✓ Highlights:
 - Non-SAP Legacy System Rollout to SAP S/4 & C/4 Hanna + Fiori with several customizations to the company reality.
 - Go Live Stabilization and Improvement Project; with different go-live waves, due to the highly customized S/4Hanna for the company and agriculture segment.
 - SD Support Responsible.
 - Control and sales permission based on the production capacity (product allocation).
 - During SAP implementation project was the leader of these deliveries, among others: Fiori's Billing Management Report (also known as President's report) where the Board has a 360 view of what was billed in current month, current year, what is going to bill and compared with previous years and with the Sales forecast. Also, they can access details like sales orders and deliveries. It was a developed report, adapted to local needs. Also, Sales Planning implementation and others.

✓ BAYER

- ✓ German pharma and crop science company.
- ✓ He was in the company from 2012/08 to 2019/07 acting as Senior SAP OTC Expert / Implementation Manager / SD Architect.
- ✓ Highlights:
 - Best approach: SAP SD Solution Designer
 - SAP Coordinator between Sep-Dec18. Responsible for Crop Science SAP system deliveries, for confirming technical solutions, managing capacity, quality and cost efficiency of the solution deliveries.
 - As Technical Leader managed 4 to 6 resources for the project iPSE Order to Bill Brazil.
 - Solution implementation manager for pharma and crop businesses.
 - It has been pharma business partners for OTC/SD issues, managing expectations and solutions (in 2015).
 - Senior consultant for projects and enhancements.
 - Idealizer and implementer of a prototype mobile app for the sales order creation via voice.
 - Personal customer area advisory, to find proactively enhancement opportunities even before the users do.
 - Several other enhancements and level C and D support.
 - Visit to internal customers in Argentina, Peru, Ecuador and Colombia.
 - Remotely trained and supported American consultants in Brazilian localization (6 months). They used to be the end user support of a chemical business branch, which was later separated from the group (Covestro).
 - Second place in SAP contest for best customer solution (2013).

✓ Projects:

Brazil State's Defensives Control

[February 2019 to July 2019]

Technical designer and development leader

States in Brazil now want to control the agro-defensives stock and their correct use by the Farmers. Companies in this market need to send to the States all Notas Fiscais related and the agronomist prescription data. Communication done via Webservices.

The biggest challenge is that each state has its own layout and rules. In addition, the goal is to develop a flexible enough solution to meet all requirements.

Integrated Process & Service Excellence (iPSE)

[March 2017 to August 2018]

Global process and system harmonization project.

A global O2B process blueprint with the best worldwide practices was created and compared with Brazil processes for process harmonization and simplification. Each single process was revised with eyes of customer experience improvement. Local and global IT SD/APO teams developed together solutions for the identified gaps.

Erick was appointed as the local technical leader of the project, managing 4 resources.

Main challenges:

- 100 system gaps found needing solution.
- Harmonization study to reduce about 80 sales order types to 20.
- Harmonization of order and rejection reasons/several local programs adaptation.
- Implementation of sales order parallel checks, blocks and approval workflow (about 9 blocks), reducing the time the order is blocked until last approval for shipping.

Award Mileage Points Calculation in Sales Order (Crop business)

[January to October 2016]

Challenging project since the requesters for marketing area had no minor idea about information systems. Erick had to understand the requirements very well and adapt them to logical language.

Complex calculation needed several variables that were not in SAP ERP. For this, it was necessary to read BW (business data warehouse), where this data was stored coming from CRM, like customer potential information and other data like refined product cost. Also, extract invoice data and build a database with tables by customer and customer group. All of it was stored in price tables, via idoc. It was done in order that they could use the SAP standard system with the minimum modification, instead of creating a huge user exit.

About 10 price conditions were created, so the standard tools could be used. Even though it was needed to create a formula, a requirement and some user exit's enhancement points to treat and calculate those conditions. Moreover, it was created a price scale requirement formula, in order the main condition could be searched using as parameter, values generated in earlier conditions. So, other pricing update triggers were programmed.

A partial Vistex module configuration was done to enable conditions in the pricing procedure.

He did about 60% of all programming in this project as well.

Pricing procedure optimization for mobile sales order creation

[January to October 2016]

Subject treated in the same earlier Project. All procedures readapted with the purpose that the price differentiation be done by 4 different discount types, instead of having different prices for that product. Fixed discounts by product family, sales region, marketing campaign and a flex one which the sales rep could act. Different workflow triggers for managers and customer approvals.

Adaptation of different SD processes in order the representative could create sales orders by iPad even disconnected to any network, since many of them stayed days in remote offline farms.

Resolution 13 improvement

[October to December 2015]

2013's Project improvement list (see bellow's topic). Among the items, the most challenging one was to create a drill-down-like report where the user could track how a determined material had its import content calculated, listing all the inbound and outbound nota fiscal fields used in the calculation.

CRM Sales Force rollout to Brazil

[August to November 2015]

He worked as implementation manager, supervising the idoc interfaces development, providing other ERP systems requests, taking care of documentation, system transports and watching over ITIL procedures compliance. This CRM would also be used as sales order entrance for pharma business.

Service NF-e process improvement.

[August to October 2015]

Erick found in personal consultancy that there were rework and communication problems among fiscal, invoicing, accounts receivable and commercial areas.

Thus, he suggested a quick win to meet user needs at once.

Information passed from area to area via call or e-mails were replaced by a report where each department could run its search and get its own information.

But the main data, which was the municipal nota fiscal number, were got only after government website file upload. After that, this information was shared by e-mail.

A program was created to automatically upload this number into invoice and account document. Then this same data was made available in the report where the other info was already being displayed.

Peru's Electronic Invoice

[August 2014 to April 2015]

Interface to create and send invoice XML files to Peru's government. In addition, it returned to ERP, the invoice PDF generated by an external partner. The PDF then was attached to the billing document.

It was interesting that Erick had to act in different roles in this project, including the role of technical project manager, business and system analyst, programmer and even had to do the user job on understanding directly with the authorities the requirement which shifted every 15 days, without previous notice.

SAP ECC rollout to a recently bought Argentinian crop company.

[June to September 2014]

He took part locally in Argentina of the process understanding and requirement elicitation of the new business as well as in preparing and presenting the blueprint. Later, he defined a SD consultant to go ahead with the project customizing.

Nota Fiscal Eletronica version 3

[May to October 2014]

Worked in the understanding of the government new technical requirements ("notas técnicas"), finding new tags to be implemented in NF-e ("nota fiscal eletrônica") XML file, which were basically those related to foreign trade. After interpretation and definition, he allocated a SD resource and an abaper for customizing and nota fiscal BADI change.

Just-in-time logistics for imported highly perishable oncologic medicine.

[August to December 2013]

Product with only 14 shelf-life days had to arrive to the airport in Brazil and go directly to the medical treatment clinics.

Necessary extensive study of a multidisciplinary team to analyze the logistics improvement as well as fiscal legislation, in order the company did not need to receive the product physically in his plant for then dispatch it later. The team also had to take into consideration systemic changes to automate transactions and interfaces with a separate European SAP ECC system.

Picking and Invoice Automation

[May to September 2013]

For a specific pharma plant, after WM picking be physically done, it was needed to automatically trigger the SD picking (2-step picking), billing creation, NF-e and the documentation set printing.

Sales Flow Dashboard

[May to September 2013]

[Creator and implementer] Complementing to what was requested in the previous item; Erick offered to the business a monitor where in just one screen, they could visualize sales order data and status, since its creation up to the NF-e approval status and documentation printing.

Having this done, it was added buttons where different process steps could be batch or individually executed (picking, delivery grouping, invoice, NF-e, documentation, etc.) Also, an automatic refresh function was added so the dashboard could display real time information on TV's that would be scattered in the logistic areas.

Resolution 13 and FCI (ICS – Import Content Sheet)

[December 2012 to October 2013]

Brazil was surprised by a Federal Senate resolution approved in November 2012 to be implemented in one month although the requirement was still a mystery.

Erick, together with the project team, did their best to interpret the fuzzy law and meet the date requirement. Bayer was one of the first companies to develop a solution to this dilemma. The government changed the rules 3 times in 2013, forcing the team to adapt to the solution but succeeding in meeting the government obligation.

Therefore, in November 2013, Bayer scored second place in an SAP contest for the best localization customer solution. Erick and a colleague presented the solution in an event at the SAP factory in São Leopoldo/RS.

NF-e access key for customer return orders

[November 2012]

The NF-e access key generated by the customer needs to be filled in the NF-e document. It is important and mandatory for the SPED fiscal system, a way the government can cross taxpayer data.

The current process was the sales assistant created the return order and then sent the paper documentation to fiscal area who, days later, had to inform the access key at the nota fiscal document, a terribly slow and manual process.

In order to eliminate rework, Erick inserted in the return order a mandatory field where the assistant, with the paperwork in hands, could already inform the NF-e access key (random number and check digit), and it later was transferred automatically to the nota fiscal. It is important that the field checks if the user typing is correct by calculating the check digit.

✓ SOLVAY / RHODIA

- ✓ French Belgian chemical company.
- ✓ Worked in the company since 1997 acting as below:
 - 2007 – 2012: Senior OTC SAP Expert
 - 2005 – 2007: OTC SAP Expert
 - 2002 – 2005: Junior SAP SD Expert
 - 1997 – 2002: Foreign Trade Finance Assistant

✓ Highlights:

- Main SD consultant in the global rollout project to Brazil and Venezuela, customizing practically alone all the SD, including all the Brazilian localization.
- Expatriated to USA for 2.5 years to stand for the core global team and implement SAP OTC module in the company American branch, rolling the system out to a company that had no knowledge of SAP.
- While Junior SAP SD expert, he was for 3 years the responsible for the SD Support in the company. He won 2 department prizes as the best customer aid of the SAP competence center.
- Before that, I worked at the foreign trade finance area, being FI user for about 5 years.

✓ Projects:

Freight cost calculation to Brazil and Argentina

[July 2011 to August 2012]

In the Solvay rollout to Brazil, he worked as business analyst to the Transportation (LE-TR) implementation as well as a new tool to upload freight cost conditions.

Nota Fiscal Eletrônica version 2

[July 2010 to July 2011]

Erick was technical leader and responsible for the government requirement understanding and implementation, together with the fiscal and legal areas. About 30% of the existing NF-e was changed. But the project was so successful that most of the users had not noticed that the project went live.

Price Interface between SAP ECC and CRM (no SAP) for North America

[August 2009 to July 2010]

An incredibly challenging project where prices were updated on both systems. In CRM by the sales representatives with the prices negotiated with the customers. In ECC, by the price department, with mass change update for all prices, like yearly adjustments or commodities variation.

Global SAP ECC Rollout to United States and Canada

[September 2006 to July 2009]

SAP ECC implementation in more than 50 plants. Users had no knowledge of SAP, and the challenge was to teach them every detail and have their collaboration for a successful implementation. Erick was the consultant responsible for all pricing, outputs and interfaces, highlighting the bill of lading (logistic document), invoices, labels, packing slips and picking lists. Sales order pricing behavior adapted to the selling terms (kind of price incoterms only used in USA). Price scales based on the sales order total quantities. Interface to Vertex, a tax repository. Mass price update tool. Erick managed other 2 SD consultants for these deliveries. After the Project, Erick worked 6 months in USA for the hyper care and another 6 months from Brazil for the system stabilization.

Global SAP R/3 core Rollout to Brazil and Venezuela

[September 2004 to September 2006]

Brazil and Venezuela branches already used SAP R/3, adapted to the local needs. The main challenge was to discuss with the French core team and to prove the need of local special treatment, which the system could not just be rolled out without any modification. Erick alone customized all Brazil localization and local processes, specified and evaluated all programs, interfaces, formulas, pricing, output and nota fiscal. Also, he helped to implement warehouse handling units.

CFOP legal codification changing.

[December 2002 to January 2003]

CFOP code is the nota fiscal operation type. In January 2003, a new regulation would take place, in which the CFOP code would increase one digit.

Erick, although with only 6 months of SAP experience, was appointed to this project that consisted in applying a huge 300-page SAP note and customizing the CFOP determination for all company processes.

✓ **São Paulo ALPARGATAS**

- ✓ Brazilian textile and footwear company, widely known by its product: Havaianas slippers.
- ✓ He was in the company from 1995 to 1997 acting as foreign trade finance assistant.
- ✓ Responsible for the department controls, which were done before him in Lotus 123, Erick migrated them with their macros to Excel.
- ✓ In charge of the area accounting postings.
- ✓ Before Alpargatas Erick worked in other four minor companies as shop clerk, office assistant accounts receivable / accounts to pay assistant and foreign trade intern.
