

YANNIS VOSSOS, ORACLE EPM CLOUD CONSULTANT - HYPERION

ORACLE HYPERION | FCCS | EPBCS | EPMCS | HFM | PLANNING | ARCS | ESSBASE | OACS | ODI | DRM

Phone 5511-989033103, e-mail ivossos@gmail.com

Recent Certifications

- ✓ 2019-03: Oracle Enterprise Planning and Budgeting Cloud Service 2017 Implementation Essentials Certified Specialist. (EPBCS).
- ✓ 2019-11: Oracle Financial Consolidation and Close Cloud Service 2017 Implementation Essentials Certified Specialist. (FCCS).

Programming Languages: Groovy, Python, Jython, VBScript, SQL.

Education: Graduated in mathematics University of Athens -Athens Kapodistrian.

Languages: English, Portuguese, Greek.

Professional Goals

With over 15 years of expertise in Oracle's Enterprise Performance Management (EPM) and Business Intelligence Solutions, also known as Hyperion Solutions, I offer a unique blend of technical skillset and fervor for the field. My primary motivation is to assist individuals, especially those in the accounting sector, in achieving their objectives. The satisfaction derived from aiding an accountant across the globe to finish their work efficiently and spend more time with their family fuels my daily motivation.

I actively participate in the Oracle Customer Connect Community, where I assist others while staying abreast of all new functionalities within the monthly updates. My contributions have earned me recognition in the form of a Gold Trophy and Problem Solver Badges (@ioannisvossos).

My daily responsibilities encompass deep data analysis, offering insights and guidance to my clients, and simplifying complex topics such as multilevel intercompany eliminations, multiple currency translations and overrides, and the correct interpretation of FCCS_CTA. I derive immense satisfaction from elucidating ownership and Minority Interest calculations, and providing clear, concise information that empowers my clients to make informed decisions.

While I thoroughly enjoy designing end-to-end solutions, encompassing analysis, design, implementation, and testing phases, I also thrive on challenges. These include migrating applications from HFM to FCCS, writing business rules for Minority Income, Block Creation, Cash Flows, Investments x Subsidiary Equity Eliminations, and most recently, changing the fiscal year. My extensive experience with the Oracle EPM suite, coupled with my ability to develop financial models that support investment decisions and provide valuable insights, makes me a valuable asset to any organization. My easy-going communication style further enhances my ability to deliver complex information in an accessible manner.

It is in change that we find purpose. Heraclitus.

Professional Experience

2023 - Present | AI Sommelier Implementation for Wine E-Commerce Site

- Role: Lead Developer, Full Stack.
- Technologies Used: OpenAI APIs, Gadget App, React
- Details: Spearheaded the development and implementation of an 'AI Sommelier' assistant for a wine e-commerce platform. This innovative project was built using OpenAI's APIs, the Gadget app, and React for front-end development. My responsibilities covered the full project scope – from initial concept and planning to development, testing, and deployment. The AI sommelier significantly enhances the user experience by providing personalized wine recommendations, leveraging AI technology to create an engaging and interactive customer interface.
- React for front-end development. My responsibilities covered the full project scope – from initial concept and planning to development, testing, and deployment. The AI sommelier significantly enhances the user experience by providing personalized wine recommendations, leveraging AI technology to create an engaging and interactive customer interface.
- d the full project scope – from initial concept and planning to development, testing, and deployment. The AI sommelier significantly enhances the user experience by providing personalized wine recommendations, leveraging AI technology to create an engaging and interactive customer interface

2023/Feb – 2023 Jul| Oracle Consulting Brazil → FCCS

As the Lead Techno-Functional Consultant for Oracle's Financial Consolidation and Close Cloud Service (FCCS) at Oracle Brazil Consulting, I was entrusted with the critical responsibility of implementing a new Oracle Cloud Infrastructure (OCI) instance of FCCS. This project was executed in accordance with Oracle's Enterprise Performance Management (EPM) Cloud methodology.

The implementation was particularly challenging due to the complexity of the model required by our client, Elera Renováveis, a leading player in the renewable energy sector. My role involved not only technical expertise in Oracle's suite of tools but also a deep understanding of the client's business needs and processes.

A significant part of this project involved the configuration and management of equity pick-up calculations and the elimination of transactions between related parties. These complex financial processes were critical to providing an accurate and comprehensive view of Elera Renováveis' financial position.

Throughout the project, I successfully navigated the complexities of the model, ensuring that the solution was tailored to meet Elera Renováveis' unique requirements. This involved close collaboration with stakeholders, rigorous testing, and meticulous attention to detail to ensure the successful deployment of the new OCI instance.

My role was pivotal in enabling Elera Renováveis to streamline their financial consolidation and close processes, including equity pick-up calculations and related parties eliminations. This enhanced their operational efficiency and business performance by providing a more accurate

It is in change that we find purpose. Heraclitus.

and transparent view of their financial status.

*It is in change that we find purpose. **Heraclitus.***

2022/NOV–2022 JAN| FPS Inc. → FCCS

In a key project for Flexible Packaging Solutions, a company recently acquired by Gulf Refined Packaging, I was assigned the task of altering the fiscal year within Oracle's Financial Consolidation and Close Cloud Service (FCCS) and Planning and Budgeting Cloud Service (PBCS). The project required shifting the start of the fiscal year from November to January, ensuring all data points, including Total Assets, Total Liabilities, and Equity/Retained Earnings Accounts, were accurately matched between the two applications. I also managed the tie-outs in entity currency (A), USD reporting, and Euro reporting.

A significant part of the project involved managing the impact of loading data into the 'closing balance input' and using default system movements. This was achieved by loading data amounts at the closing balance input member Year-to-Date (YTD) and balancing the account using custom created accounts and custom logic in the 10 Business Rule. The project also required seamless file integrations with the ERP systems via data management, and the management of 12 different entry currencies and two reporting currencies.

To achieve the desired outcome, I created a new application, imported all metadata from the old application, imported all artifacts, and initiated the new fiscal year in January. I exported CSV files via data export for FCCS and shifted the months of November and December back a year in the new application. In PBCS, I worked with two cubes: one hybrid named FIN, and the other ASO reporting, sourced from the FIN cube. For the FIN cube, I imported an Essbase level 0 dump and moved the Nov/Dec data via a business rule. For FCCS, I loaded movements for the remaining years and months starting from September 2018 up to December 2022. To manage the large volume of data, I developed a VBA macro-Excel template to generate a substantial number of journals for Cumulative Translation Adjustment (CTA), retained earnings prior, retained earnings current, and system accounts based on the differences.

It is in change that we find purpose. Heraclitus.

2022/SEP–2022 NOV| OCYAN → FCCS

I was selected by Oracle Brazil to provide critical support to Deloitte Brazil on a complex implementation and migration project transitioning from Hyperion Financial Management (HFM) to a new system. This project demanded a hands-on approach and a deep understanding of both systems.

In my role, I was responsible for creating business rules and building blocks, which are essential components for the successful operation of the new system. I also enabled amount overrides for all the companies involved, using custom daily exchange rates. This required a deep understanding of financial systems and the ability to tailor solutions to meet the unique needs of each company.

One of the most challenging aspects of the project was troubleshooting Equity Pick Up allocations and eliminations. This required a detailed understanding of the financial processes involved and the ability to identify and resolve issues quickly and effectively. My role in this project showcased my technical expertise, problem-solving skills, and ability to deliver results in complex and demanding environments.

2022/JUN–2022 SEP| SQUARE Inc. → Enterprise Profitability & Cost Cloud Service.

Block Tax Transfer Pricing.

I took the initiative to develop a new financial model designed to calculate the quarterly Research & Development (R&D) and General & Administrative (G&A) charges for Squareup PTE Ltd. This model was meticulously designed to account for various financial factors, including Stock Based Compensation (SBC), third-party costs, and other operating expenses.

The model was a key component of a broader Transfer Pricing Planning (TPP) solution. This comprehensive solution was designed to streamline and automate the process of extracting, transforming, and loading (ETL) data from various source systems. It also facilitated the collection of data from end users via an intuitive web form interface.

The TPP solution was not only capable of calculating TTP data but also equipped with robust reporting capabilities. This allowed for the efficient generation of insightful reports, providing stakeholders with a clear and accurate view of TTP data.

The creation of this model and the broader TPP solution exemplified my ability to develop sophisticated financial models and systems that streamline processes, improve data accuracy, and provide valuable insights for decision-making.

It is in change that we find purpose. Heraclitus.

2022/APR –2022 JUN| GREIF – FPS → FCCS PBCS

To optimize consolidation efforts, the Financial Control and Compliance (FCC) was restructured into specialized entities, each focusing on distinct areas of interest and expertise. This strategic reorganization allowed for a more targeted approach to managing various financial processes.

As part of this restructuring, a new entity, Flexible Packaging Solutions (FPS), was established. FPS was formed by extracting specific functions from the FCC, including those related to capital standards, loan servicing reporting standards, customer account aggregator standards, data standardization, and granular data management guidelines. This allowed for a more focused approach to managing these critical areas.

To support efficient reporting, I developed an Aggregate Storage Option (ASO) Reporting Cube. This cube was sourced from a custom Block Storage Option (BSO) Cube, which in turn pulled actuals from the FCCS Consolidation Cube via data management. I implemented intercompany eliminations in the ASO cube using Multidimensional Expressions (MDX) formulas. To enhance speed and meet user requirements, data was pushed from the Financial cube to the ASO cube in a web form using Groovy scripts, providing an efficient alternative to data maps.

In addition, I created a new Account Reconciliation Cloud Service (ARCS) application with a focus on Reconciliation Compliance. This application was designed for Balance Comparison and Account Analysis, specifically for Accounts Receivable (AR) / Accounts Payable (AP) and Bank transactions. This streamlined the reconciliation process and ensured all transactions were accurately recorded and reconciled.

2022/JAN –2022 APR| STOLT NIELSEN – ARCS- FCCS

While providing support for the existing account reconciliation process, I identified and implemented several key improvements to optimize the system and enhance its efficiency.

Firstly, I streamlined the quarterly and yearly processes by creating new Group Profiles specifically for Fixed Assets and Equity Accounts. This allowed for more efficient management and tracking of these critical financial elements. Additionally, I developed new data integrations in Data Management for subsystems and subledgers, which enhanced the accuracy and efficiency of data transfer and processing.

Secondly, I implemented an automatic translation feature in Data Management to higher currency buckets. This feature automated the process of currency conversion, reducing the potential for errors and significantly speeding up the process.

Thirdly, I conducted workshops to transfer knowledge of the new functionalities to the business users. These workshops were designed to ensure that users could effectively utilize the new features and understand their benefits, thereby maximizing the value derived from the system improvements.

In addition to these improvements, I also undertook a project to migrate FCCS to a dense-sparse optimization model. This migration was designed to enhance the performance of the system by optimizing the storage and processing of data, thereby improving the overall efficiency and effectiveness of the financial management process.

2021/SEP –2022 DEC| MICROCHIP FCCS – NEW FREE FORM ASO REPORTING CUBE.

In a significant project, I served as the lead designer and developer for the migration of a 60 GB cube to a Dense Sparse Optimization (DSO) option. This was a complex task due to the size of the current application and the extensive chart of accounts, which included approximately 10,000 accounts and more than 1,000 entities. The performance limitations of the existing system necessitated this migration to enhance efficiency and manageability.

Post-migration, I undertook the task of amending all insertion rules and reconfiguring all data management integrations. This ensured the seamless operation of the new system and the accurate transfer and processing of data. The migration resulted in a significant reduction in database size and a marked improvement in consolidation performance, demonstrating the effectiveness of the DSO option for managing large and complex datasets.

As part of the Account Reconciliation Cloud Service (ARCS) implementation, I developed new integrations in data management. These integrations were sourced from views via the integration agent, ensuring the accurate and efficient transfer of data.

In addition, I created an Aggregate Storage Option (ASO) freeform cube to host follow data from existing and current applications. This cube was designed to provide a flexible and efficient solution for managing complex datasets. I also developed a Narrative Reporting - Waterfall Report, providing a clear and comprehensive view of financial data and enabling informed decision-making.

2021/JUN – 2021/SEP | ARCHITECT – LEAD DEVELOPER INSURANCE CO. NYC.

Lead designer / developer for Operational Transfer Pricing model in Oracle PCMCS.

Developed a Tiered waterfall allocation Rule Set design for:

- Account / Corporate area finance / actuarial functions.
- Account/ Activity /Field operations functions/ branch profit / underwriting and claims service center.
- Shared Services Activity Reciprocal Assignments for SGA.
- Insurance products / Activity/ insurance contract / Policy/ Receiving Entities/ Markup.
- Activity / Customer Segment / Channel.
- Optimized allocations design using global context and rule set context, reducing the number of rules.

It is in change that we find purpose. Heraclitus.

- Model Views for traceability for each allocation tier.
- Query development for jump starting the analysis in Excel Smart View.
- Financial Reports for Income Statement Policy / Customer Segment / Channel Pre vs Post Cost Allocations & Invoices.

2021/JAN – 2021/MAY | LEAD DEVELOPER DP WORLD SANTOS

Lead architect for a global Transformation Program for the Oracle EPM Cloud Initiative for Brazil Region.

Designed and developed the following models:

- Oracle Workforce Planning Module -Due to complex Brazilian labor legislation laws, created a custom cube for workforce planning based on Job details and headcount drivers.
- Oracle Profitability for cost center SG&A Account allocations models, baes on drivers such as Headcount, square feet, and others.
- Oracle Strategic Modelling to accommodate the multi annual Strategic plan, with emphasis on the capital expenses and debt. Operational Revenue detailed driver based forecast and multiple Scenario what if simulations, based on macroeconomic indexes and volumetry.
- Balance Sheet and Cash Flow planning all integrated with the operational models. Integrated with Oracle EPM Cloud Financials Module via data maps for both inbound and outbound data.
- Oracle Account Reconciliations for Balance Comparison and Analysis
- Oracle Financials Planning integrations via data management with the Oracle ERP Cloud General Ledgers for Actual data.
- Highly demanding Statutory Reporting sourced from Financial Consolidation application.
- Management Reports for tracking Profitability between Business Units.
- Completely automated the loading process via Python / Oracle EPM Rest API's.
- Designed and developed application web forms and calculations to client's unique requirements for driver-based revenue forecasts
- Custom Navigation Flows to provide a unified and localized experience to the user from all the modules.
- Groovy scripts created to create block for the revenue drivers' projections.

*It is in change that we find purpose. **Heraclitus.***

2020/JUN – 2020/DEC | SENIOR CONSULTANT HACKETT DIGITAL MANAGED SERVICES

During this period I was supporting the following technologies:

FCCS, HFM, EPBCS, Planning, ARM, ARCS, ODI, Data Management, ODI, FR. Attending north American customers such as: Myriad, Paradigm, Vetsource, ATW, Olympus, Mills Fleet, Carlisle, Hapi, Edgewell.

Besides the support to operations to critical and non-critical requests, I can highlight some of the projects I have developed:

- A) Created an automated Integration pushing data from HFM into Planning, running on two different domains triggered from the target domain. My solution is based on FDMEE Open Interface Adapter, Jython scripts, SSH and SQL.
- B) Created a VBScript that connects to MSAD and SQL server and extracts into a .csv file the last user login in HFM during a six-month period. The report is sent via email to the finance hub users.
- C) Created a customized Cash Flow Reporting application in EPBCS for a Hybrid Cube, pushing data from the Financials Module Cube. Cash flow movements was populated automatically via Business Rules.

2020/JAN- MAY | ORACLE FCCS CONSULTANT/ARCHITECT - TRAVELEX

Spin-off HFM to the FCCS transformation project. Responsible for overall application design, data, and metadata transformation into an FCCS format, for a worldwide solution. After my initial analysis, I converter the COA and all the rest of the dimensions coming from HFM and merged with FCCS seeded members. We use an extended dimensionality cube to accommodate for both statutory and management reporting. In the entity dimension we have three parallel hierarchies, use also of the Multi- GAAP dimension with custom members for IFRS16. On the movement, dimension custom movements were created for a customizable Cash Flow Reporting.

This is a global application with 49 functional currencies, created override translation rules for historical accounts such as Share Capital and Share Premium.

The custom rule also calculates the default movement member for both P&L and BS accounts.

Special configurable consolidation rule for some Joint Venture entities, and a custom rule for partner elimination of investment in subs, between other requirements.

Complex data management integrations for worldwide locations and general ledgers.

2019/08 – 2019/12 | ORACLE FCCS CONSULTANT - ÔMEGA ENERGIA

Develop and implement a financial consolidation process for a group of 82 companies. The overly complex business environment due to constant restructuring and acquisitions and the

It is in change that we find purpose. Heraclitus.

dynamic nature of the energy grid and legislation in Brazil. We integrate the Oracle ERP Financials cloud for daily movement trial balances.

For the reconciliation of cash accounts with banks, the Oracle ARCS tool is used for transactional reporting (transaction matching).

We create custom rules for equity eliminations, equivalence, and combine equity eliminations with investment accounts for quick verification. Due to incorrect entries in intercompany balances, we design validations and special reports, as well as reverse diaries to help detect differences and facilitate the closing. We project cash flow for operations, investments, and financing notes and explanation for reporting to the stock exchange.

2020/06 - 2021/2 | ORACLE HFM CONSULTANT – TECHNIPFMC

Support remotely the Finance Hub team for all Incidents and request for a global HFM application. Directly attending the business user in consolidation issues, having to explain rule logic for CTA, Investments in Subs, Intercompany eliminations, journals, and translation logic.

Responsible for all metadata requests such as new entities, accounts, activate de-activate and for the opening and closing of periods.

Also supported all data loads in FDMEE and ODI coming from diverse sources such as SAP and other Hyperion Instances. Smart view and FR reporting support and custom Jhat programs for automation. Creation of new forms and grids.

Responsible for all communication and documentation in Service Now (SNOW) for applying to production environments all change requests.

2018/04 – 2019/01 | SENIOR DEVELOPER - HYPERION TABLEAU - NCL MIAMI

Creation of dashboards in Tableau for the Income Statement.

In this project, I exported and transformed the Application data and metadata in Hyperion Planning on-prem, in an Oracle DB repository.

I used ODI (Oracle Data Integrator) to build all the interfaces in the financial data mart, created to receive Hyperion data.

Then Tableau workbooks and dashboards were created, using the data mart as the base connection.

2016/10 – 2017/10 | HYPERION PLANNING LEAD DEVELOPER - ASTRAZENECA

Design and development of multiple revenue streams / driver-based labor models in Hyperion Planning for all global markets. Sophisticated allocations for demand sales forecasts, predictive planning modeling from historical data.

It is in change that we find purpose. Heraclitus.

2017/04 – 2017/08 | HYPERION HFM CONSULTANT - GPA (GRUPO PÃO DE AÇÚCAR)

Improvement of the IFRS model for legal group accounting reports for the CASINO group of companies. Complex mappings for ledger data generated by SAP ERP. Automation via calculation rules for Equity Income and eliminations of Equity.

PRIOR - GOODYEAR REGIONAL OFFICE LATIN AMERICA - LEAD DEVELOPER

Redesign of 14 Planning Essbase Applications for Latin America, working at the regional office in Sao Paulo Brazil. My involvement as a Hyperion Lead was

1. Train the team of five to GY's Rolling Forecast Model.
 2. Develop the blueprint and technical solution.
 3. Redesign all monthly rolling forecasting process and Business Rules, account schedules, and SAD expenses, new allocation methodologies. Build on Essbase a Walks Analysis for all Goodyear's products and customers via sophisticated Business Rules and modeling; To further illustrate the causes and impacts on variances between scenarios, like Product Mix, Currency Translation, Volume, etc.
 4. Tuning of Essbase applications, down to 90% less execution time for the whole forecast process.
-
